

Coral FlexiCom Specifications

All models feature a powerful processor, distributed control, switching logic, dual bus architecture and fully distributed microprocessor design.

Coral FlexiCom 200 – For locations needing just a few to 200 ports.

- 32-bit processor
- 1 to 3 cabinets – 50 x 41 x 20 cm
- Wall or rack mounted
- Optional internal battery support for power failure operation

Coral FlexiCom 400 – A mid-sized platform supporting up to 384 ports.

- 32-bit processor
- 1 cabinet – 56 x 87 x 34 cm
- Wall mounted
- 48 VDC input (Optional battery support for power failure operation)

Coral FlexiCom 5000 – Duplicate processors for medium to large businesses requiring up to 5,000 ports and critical component redundancy.

- 32-bit processor(s)
- 1 to 5 cabinets – 3 shelf 152 x 89 x 52 cm
– 4 shelf 187 x 89 x 52 cm
- 48 VDC input (Optional battery support for power failure operation)
- Optional duplicate common control

Coral FlexiCom 6000 – High traffic duplicate processors for large businesses requiring up to 6,000 ports and critical component redundancy.

- 64-bit processor(s)
- 1 to 5 cabinets – 3 shelf 152 x 89 x 52 cm
– 4 shelf 187 x 89 x 52 cm
- 48 VDC input (Optional battery support for power failure operation)
- High traffic processors (200,000 BHCA)
- Optional duplicate common control

About Fujitsu

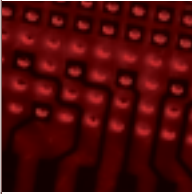

Fujitsu is one of the leading e-Services companies in Australia and New Zealand. Throughout the region, Fujitsu is helping corporate and government customers to design, build and operate solutions which offer competitive advantage in the internet world, from state-of-the-art infrastructure through to complex e-Business solutions. Our portfolio of IT services includes consulting, systems integration, prime contracting and a full range of professional services.

ICT Convergence

FUJITSU

THE POSSIBILITIES ARE INFINITE

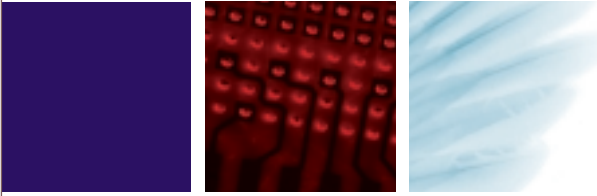

Coral FlexiCom

The truly flexible IP enabled voice server

From 60 to 6000 ports, Fujitsu's Coral FlexiCom Voice Servers empower your business with a comprehensive software suite and seamless growth capabilities, whilst maintaining backward compatibility as new technologies evolve...the closest you can come to true future proofing.

Coral FlexiCom 200

Ideal from 30 to 200 ports, the basic cabinet of the FlexiCom 200 is the only component of the FlexiCom system to use miniature circuit cards. Expansion cabinets may be added with full sized cards up to 200 ports (lines and extensions).

Standard features include:

- AC powered (optional on board 30 minute battery back up)
- Supports Basic & Primary Rate ISDN
- Up to 32 extensions on the basic cabinet
- 30 plus lines on the basic cabinet

Coral FlexiCom 400

For mid-sized businesses requiring 100 to 384 ports. The FlexiCom 400 is available in two models, one for general business, the other for heavy duty applications such as call centres.

Standard features include:

- DC powered
- Support for Basic & Primary Rate ISDN
- 16 universal slots for line or extension cards
- High density 24 circuit extensions cards

Coral FlexiCom 5000

Available with either 2 or 3 universal card shelves of 16 slots each, the FlexiCom 5000 allows over 1000 ports in a single cabinet. Expandable up to 5000 ports with additional cabinets.

Standard features include:

- DC powered
- Optional duplicated processors with 3 minute changeover
- Supports Basic & Primary Rate ISDN
- 16 universal slots for line or extension cards per shelf
- High density 24 circuit extension cards
- Fibre optic remote shelves

Coral FlexiCom 6000

One of the most powerful voice servers on the market. Similar cabinet layout to the FlexiCom 5000, however with redundant systems throughout and 6000 port capability. Ideal for high volume call centres or transit switching.

Standard features include:

- DC powered
- 64-bit, hot swap duplicated processors
- Over 200,000 call completions per hour
- Redundant power supplies

Flexible Features

Fujitsu's Coral FlexiCom Voice Servers each provide an entry point for your current business, keeping in mind future growth. Hardware is shared between all systems*, and software features are common throughout.

Best of all, the Coral FlexiCom Voice Servers come with most of the software you will need as standard features, not as extra cost options. Features include:

- Automatic Call Distribution (ACD) with matrix skills routing for call centers
- Station Message Detail Recording (SMDR) for call accounting systems
- Least Cost Routing (LCR) ensuring the best deal from your carrier(s)
- Traditional and ETSI ISDN support
- First party Computer Telephony Integration (CTI)
- Full hospitality suite including check-in/check out, auto wake-up and more

In fact, the only options that you pay for are:

- Inter-switch networking using the ECMA/ISO international Q.SIG standard
- Third party CTI using ECMA CSTA, Novell TSAPI, TSAPI NT or MS TAPI3
- Verified forced account codes

Standards Throughout

To ensure that your investment stays current, Fujitsu guarantees that all Coral FlexiCom Voice Servers use international standards, such as ISO, ECMA and ETSI. Our optional Automatic Call Distribution (ACD) Management Information System (MIS), Computer Attendant Position (CAP) and customer administration tools all use Microsoft Windows 98, Windows 2000 or NT, as does our full e-business call centre package, the Coral EPICCenter, which provides WEB chat, voice, and email routing.

* Excluding miniaturised card in base FlexiCom 200 cabinet

Natural Networking

Using the internationally standardised Q-SIG protocol, Fujitsu's Coral FlexiCom Voice Servers can talk to other FlexiCom's and even other vendors PABXs in a network environment. The best part is the way the Coral FlexiCom can network over your data network (Voice over IP), using on-board compression and without losing features between sites. It's all on cards within the system.

If you don't have a data network or wish to keep your voice and data separate, the FlexiCom can also provide voice over Frame Relay, ATM services or Microwave - in fact via virtually any medium.

It's all On-Board

Whether you require DECT GAP cordless handsets, call centre messages, automated attendant, voicemail or even unified messaging; the Coral FlexiCom Voice Server has it all inside the system. This means you only need to deal with one vendor, and don't have to worry about external computers, and can rely on power back up from the system.

Surprisingly Cost Effective

For more information, on the latest technology in voice servers, contact the Fujitsu Action Line on 13 23 22. We're confident you'll be surprised about the affordability of Fujitsu's Coral FlexiCom Voice Servers, and the further cost benefits it can bring to your business.
